Projects

Virtual Vinyl
This is a music collection web app that was created to emulate a user's library. This is a SPA where the back end was created using Java & the front end was rendered with vanilla JavaScript. This was created using a REST API design - https://github.com/Andrew614/album-collection-restful-api

1-800-Movies Web App
This is a movie collection web app that was created to keep track of a user's movies. This is a SPA where the back end was created using Java & the front end was rendered with vanilla JavaScript. This was created using a REST API design - https://github.com/Andrew614/movies-restful-api

Acquisitions Inc Web App
Full stack review site of products that was created using a Java tech stack. This was a collaborative project with a team of 5 where agile, clean code and TDD methodology was utilized. This was created using a MVC design - https://github.com/Andrew614/acquisitions-inc

Blog Platform Web App
Full stack blog app that was created using a Java tech stack. It allows users to create a blog and keep track of their posts. This was a collaborative project of 2 members where TDD, agile and version control was utilized. This was created using a MVC design - https://github.com/Andrew614/blog-mvc-thymeleaf
